

BETHLEN-ETHEL SPRINGS 138-KV TRANSMISSION LINE PROJECT

At FirstEnergy, it is our responsibility to deliver the power our customers depend on in their daily lives. Keystone Appalachian Transmission Company (“KATCo”), a FirstEnergy company, has identified a need for a new 138-kilovolt (kV) transmission line in Westmoreland County, Pennsylvania, to enhance service reliability for distribution customers.

KATCo is evaluating alternative routes for the new line through portions of Derry Township, Ligonier Township and Ligonier Borough in Westmoreland County, from the existing Ethel Spring Substation to the existing Bethlen Substation.

PROJECT OVERVIEW

KATCo evaluated the existing transmission system in the area and identified the need to construct a new 138-kV transmission line to connect the existing Ethel Springs Substation to the existing Bethlen Substation. The line will extend approximately 8 to 10 miles and will be supported primarily by steel pole structures. The project is needed to reinforce the transmission and distribution systems and will enhance service reliability for approximately 11,200 customers in Westmoreland County.

The project has been presented to PJM, the regional transmission organization that coordinates the movement of wholesale electricity in Pennsylvania and 12 other states.

Continued on back

TRANSMISSION LINE SITING AND APPROVALS

A detailed routing study was performed to identify potential routes for the new line. These routes were carefully evaluated to minimize impacts on environmentally sensitive areas, property owners and communities. KATCo will seek approval from the Pennsylvania Public Utility Commission (“PaPUC”) for the project.

Detailed wetland, stream and other environmental and cultural resource evaluations will be performed along the preferred transmission line route. Necessary permits will be secured from state and federal agencies before construction.

EASEMENTS

The new 138-kV transmission line will be located generally within a 100-foot-wide easement; however, easement width may vary based on engineering design requirements. Field representatives will be in contact with property owners to discuss transmission line easements and any temporary access rights needed to support construction.

PRELIMINARY PROJECT TIMELINE

Public Outreach.....	1st Quarter 2024
Public Meeting	1st Quarter 2024
Preferred Route Selection	1st Quarter 2024
Right of Way Acquisition Commences	2nd Quarter 2024
Application Submittal Date	2nd Quarter 2025
Anticipated Approval Date	4th Quarter 2026
Construction Start	1st Quarter 2027
Project Complete & Placed in Service	2nd Quarter 2028
